

THURSDAY 2-24-22 **EXPERIENCES IN THE** **CHANGING WORLD OF** **UNDERGRADUATE** **RESEARCH**

With Wayne Johnson & Peng Yu

In the first half of this talk, we will give a general report on the involvement of mathematics faculty over recent years in undergraduate research. In particular, we will present examples of both faculty-initiated and student-initiated projects of interdisciplinary nature including outcomes of such endeavors. For the second part, Dr. Johnson will showcase his ongoing interesting work with current mathematics majors in greater detail. In view of the newly established data science track, we will highlight exciting opportunities for faculty and students across divisions to participate in collaborative research for years to come.
